

Mastercloud | Trilha #01 - Aula 05

Lab:

- Criação de VMSS com APPGW

appgw do banco é o axway

- Appgw routing rules:

The screenshot shows the 'Add a routing rule' configuration page in the Azure portal. The page is titled 'Add a routing rule' and includes a brief description: 'Configure a routing rule to send traffic from a given frontend IP address to one or more backend targets. A routing rule must contain a listener and at least one backend target.'

The configuration fields are as follows:

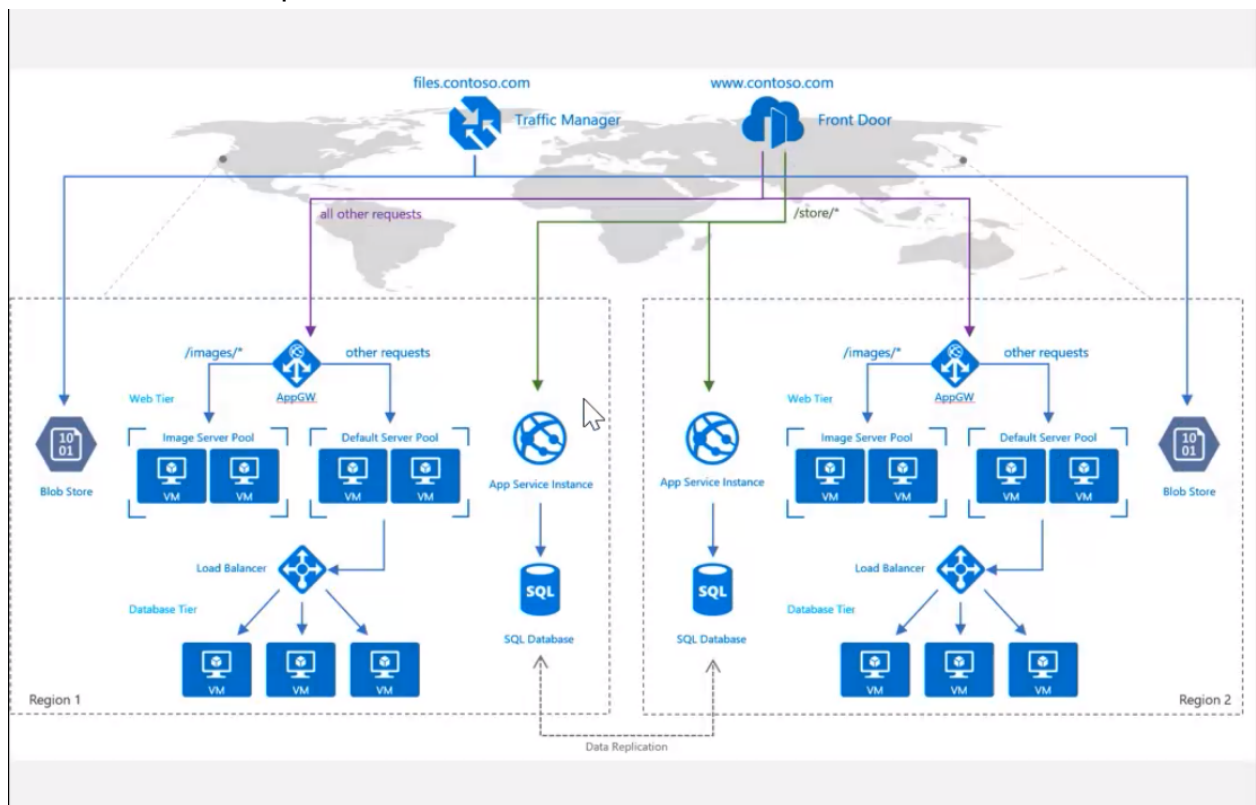

- Rule name ***: REGRA1
- Priority ***: 1
- * Listener**: *Backend targets
- Target type**: ☒ Backend pool ☐ Redirection
- Backend target ***: vms (with 'Add new' link)
- Backend settings ***: (with 'Add new' link)

Below these fields, there is a section for 'Path-based routing' with a description: 'You can route traffic from this rule's listener to different backend targets based on the URL path of the request. You can also apply a different set of Backend settings based on the URL path.'

A table for 'Path based rules' is shown at the bottom, with columns: Path, Target name, Backend setting name, and Backend pool. The table currently contains no data, with the text 'No additional targets to display' at the bottom.

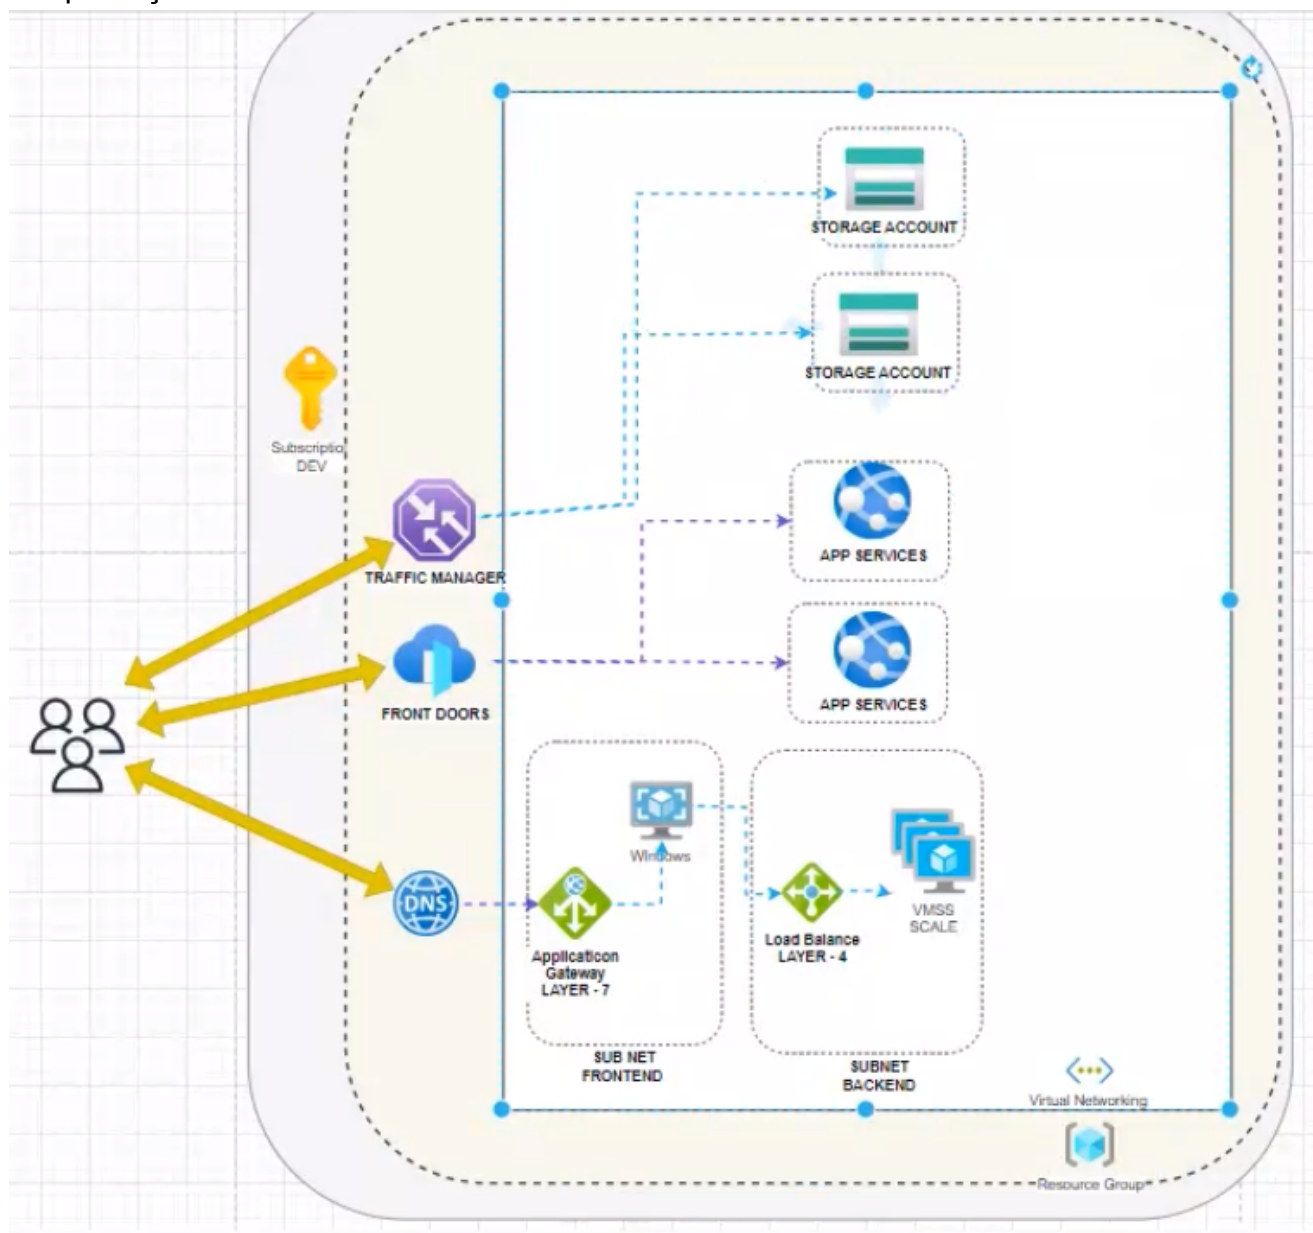

- 4 Load balancers options:

Traffic manager: a Nivel de DNS
